

Respect Weather

weather app for humans

Cloud Computing 2024

Jakub Piwko, 313451

Kacper Skonieczka, 313505

Grzegorz Zakrzewski, 313555

the project was not easy bit we manage

Respect Weather - idea

- Web weather application
- Short-term weather forecasts
 - up to 16 days
 - basic meteorological features
 - obtained from GEFS
- Historical data about weather conditions
- Expandable list of predefined locations
- User authentication & special functionality

`https://streamlit-app-uxtw4konlq-ew.a.run.app`

Respect Weather API \longleftrightarrow databases

- pandas-gbq
- google-cloud-alloydb-connector

Respect Weather API \longleftrightarrow Respect Weather App

- GET /forecasts?longitude=&latitude=&publication_date=
- GET /favourites
- PUT /favourites/<location_id>
- DELETE /favourites/<location_id>

BigQuery	AlloyDB
transformed weather data	users data
tabular	tabular
high volume	low volume
read-only	read & write
eventual consistency	high consistency

Weather forecasts

Meteorological variables

- u10 (wind u-component)
- tp (total precipitation)
- t2m (temperature)
- v10 (wind v-component)
- tcc (total cloud cover)
- prmls (pressure)

latitude	longitude	time	step	valid_time	u10	v10
90.0	0.0	2023-11-25	7 days	2023-12-02	2.43	0.66
90.0	0.5	2023-11-25	7 days	2023-12-02	2.44	0.64
90.0	1.0	2023-11-25	7 days	2023-12-02	2.44	0.62
90.0	1.5	2023-11-25	7 days	2023-12-02	2.45	0.59
90.0	2.0	2023-11-25	7 days	2023-12-02	2.45	0.57

Table 1: Sample GEFS data in tabular form

Large-scale assumptions

ETL process

- Dataproc Cluster on which Workflows are launched can be scaled up
- ETL process is designed as a PySpark Job and can be parallelized

Storage

- BigQuery with partitioned table is perfect for large volumes of data
- AlloyDB is claimed to have superior performance, scale, and availability

API and app

- Cloud Run services, on which the API and Streamlit App are based, could also be scaled up

SLO: Service Level Objectives

- Availability: aim for 99.9% system uptime monthly.
- Response rate: achieve a 99.5% success rate in responding to user requests.
- Processing time: ensure 95% of requests are processed within 1 second.
- Data freshness: Update weather forecasts in the app within 25 minutes of their release.

SLI: Service Level Indicators

- Monitoring system uptime.
- Tracking the percentage of successfully handled requests.
- Measuring the average time taken to process requests.
- Observing the timeliness of weather data updates in the app.
